## Starting Neofly 4

Once you have downloaded Neofly 4, you can install it to any location on your PC. (Neofly does not need to go in your community folder - but it will install some files there automatically).   Follow the usual installer prompts and grant access when required.
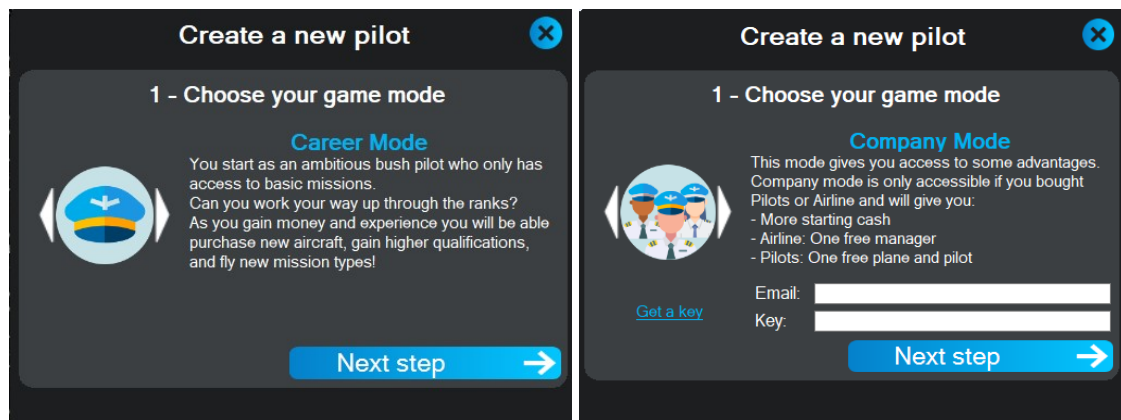

When you launch NF4 for the first time, Neofly will automatically download all the submitted aircraft.
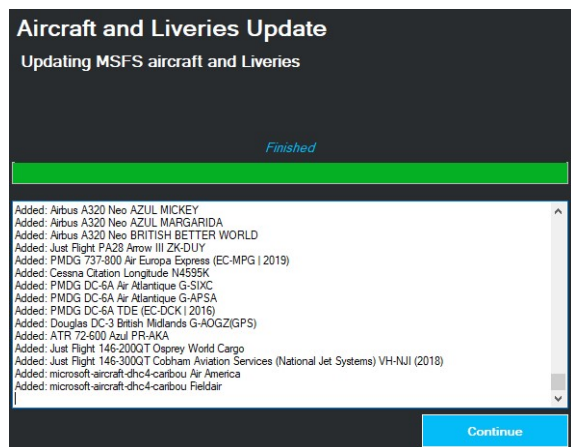

Once this has completed, press continue.

Creating a pilot

First you need to select what mode you would like to play in.

Career Mode or Company Mode. Company Mode requires a serial key. You can purchase a key via the link.

Then you need to choose your MSFS version and enter your Bing Key. If you don't have your own Bing Key you can get one for free by following the link.

Next you choose your starting aircraft.   If you select 'show 3rd party aircraft', you will be given a greater choice. Remember to choose an aircraft you own in MSFS if you want to fly it.
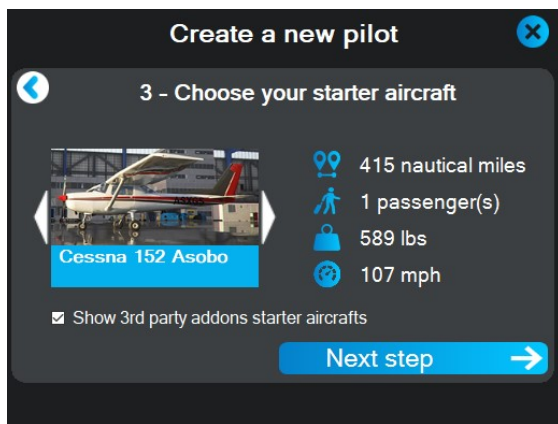

The final part to create your pilot is choosing your avatar (use the left and right arrows), then callsign (your name) and your starting ICAO (airport code).   If you are unsure of the ICAO code simply search for it on the internet.   Eg, 'Paris airport ICAO code'.   When you're happy with your selection, press Create pilot.
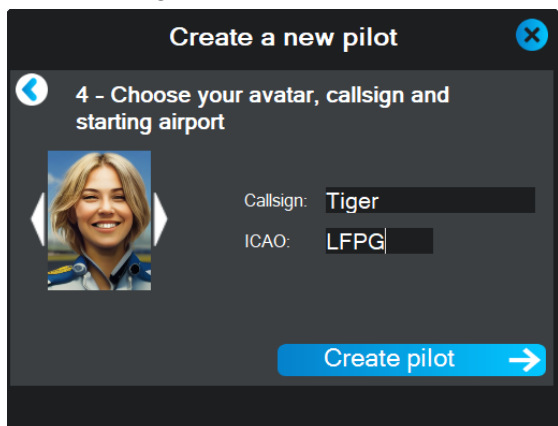

If you selected a 3rd party aircraft, all the liveries submitted so far will automatically be downloaded for you to use. Click continue once this is complete.

Install GotFriends PZL-104 Wilga 80 liveries

Installing liveries for addon GotFriends PZL-104 Wilga 80

Finished

Wilga 80: SP-PZL installed.
Wilga 80: SP-AFW installed.
Wilga 80: SP-DLK installed.

Continue

Neofly start menu. Here you can create more pilots and delete ones you no longer require.
Press the right arrow to start.

Select a pilot

Tiger
LFPG
$10 000
Company

Check this box if you would like this pilot to automatically load

Press to start

Add another pilot

Delete selected pilot
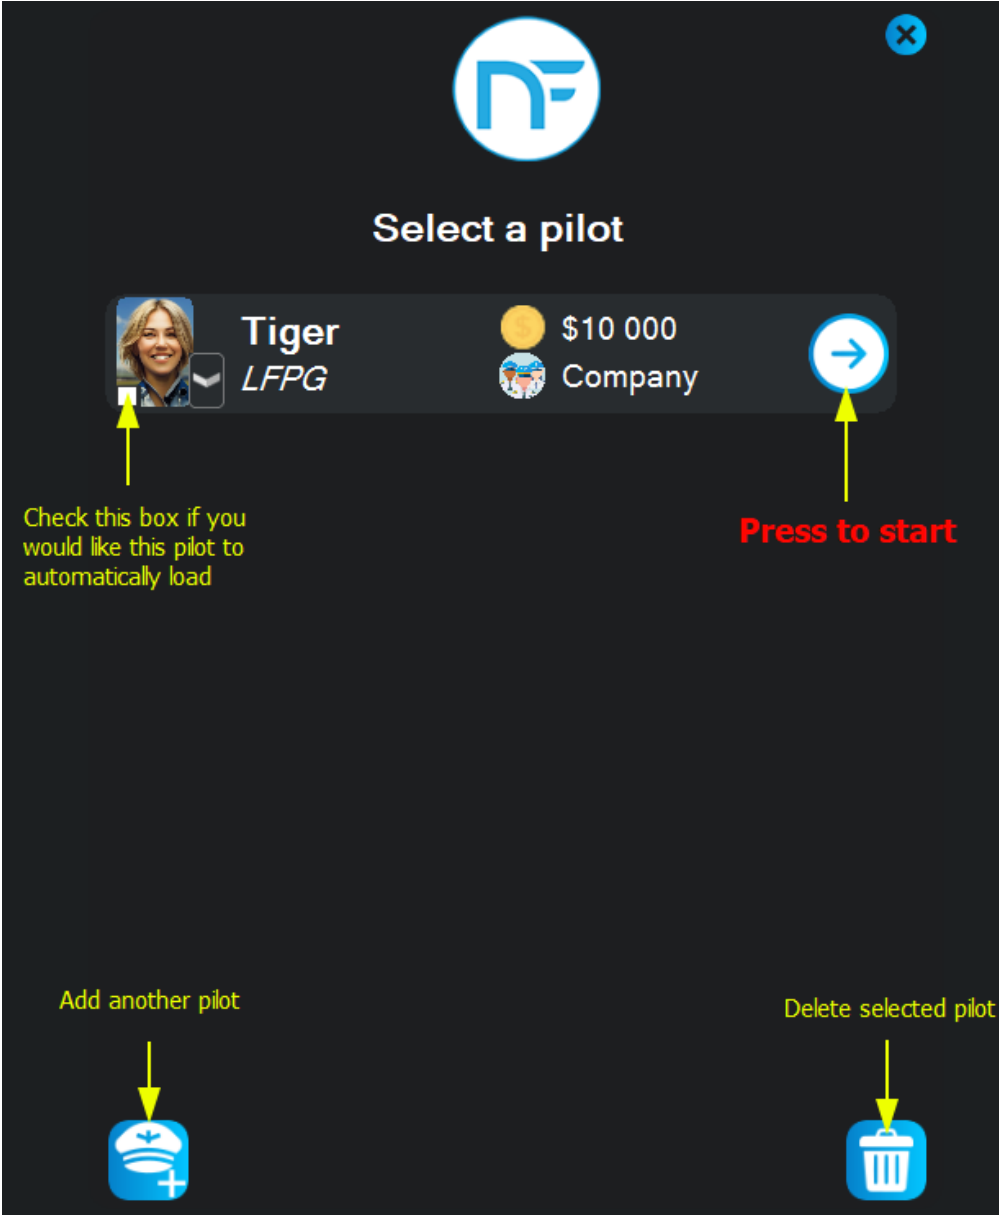

Scaling issues

If Neofly doesn't look correct, maybe the images are overlapping or the text is out of alignment - this is because of your scale settings in Windows. To fix this, go to your Neofly 4 installation folder (The default location is C:/Users/xxxxx/AppData/Local/Programs/NeoFly), right click the neofly.exe and follow the steps in the image.
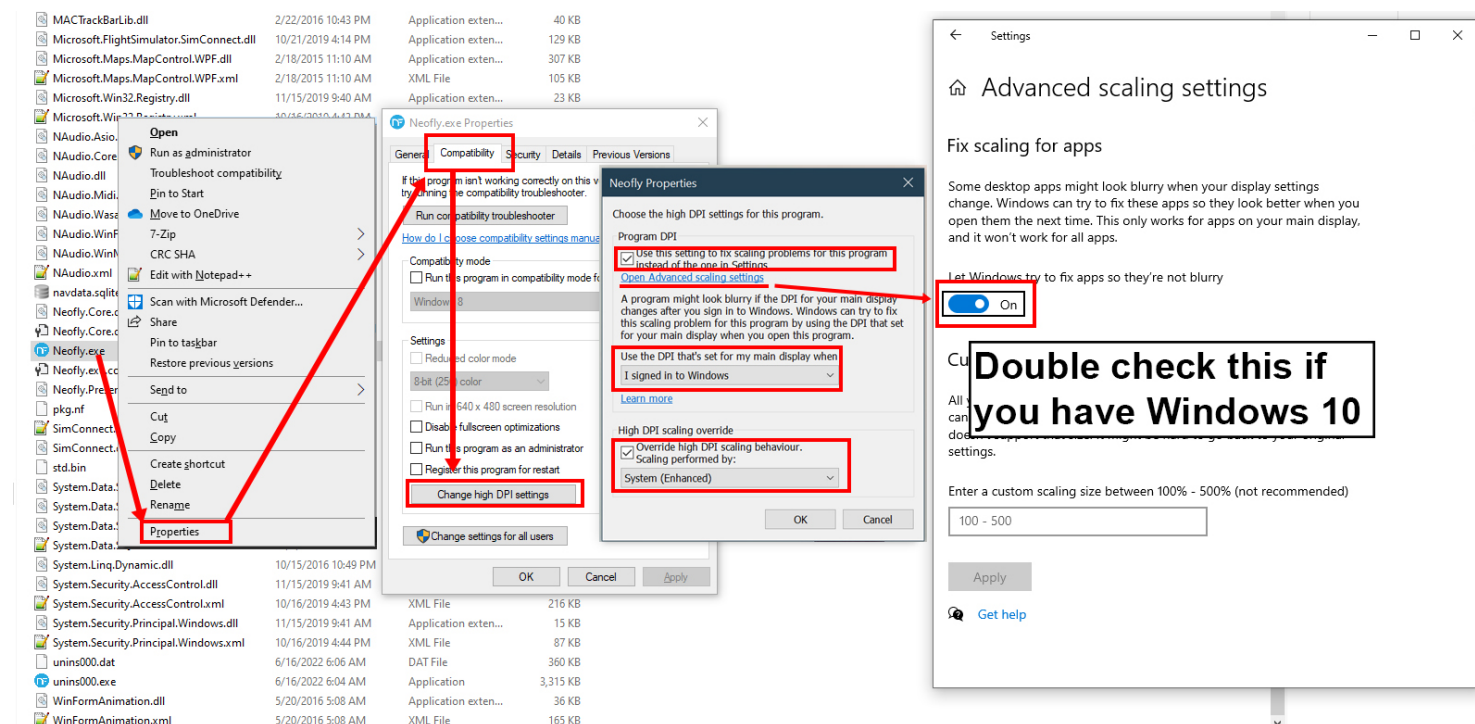

Restart your computer and launch Neofly.
